

# OwnerHive Website Revamp

## User Flow, Information Architecture & Design Guidelines

**Website:** OwnerHive.com

**Primary objective:** Product discovery + product evaluation + conversion

**Design reference:** Hostinger

**Brand:** OwnerHive

**Logo:** Keep existing logo; redesign all other visual elements

---

## 1. Project Overview

OwnerHive is evolving from a general digital-business platform presentation into a **product-focused digital solutions company**.

The new website should present OwnerHive as a professional platform offering:

- SaaS subscriptions
- Digital tools and software
- AI tools
- Digital marketing products

The website must allow visitors to quickly understand what OwnerHive offers, identify the product that solves their problem, evaluate that product, select a plan, create/login to an account, purchase, and transition into the OwnerHive dashboard.

The website should feel like a **premium SaaS/product company**, not an agency website and not a traditional corporate brochure.

---

## 2. Primary Business Goals

The website has five primary goals.

### Goal 01 — Product Discovery

Visitors should quickly discover the products OwnerHive provides.

## **Goal 02 — Product Understanding**

Visitors should understand:

- What each product does
- Who it is for
- What problem it solves
- What capabilities it provides
- What makes it valuable

## **Goal 03 — Purchase Confidence**

The website should remove the visitor's major objections before they reach checkout.

## **Goal 04 — Conversion**

The primary conversion should be:

**Visitor → Product → Plan → Account → Checkout → Purchase**

## **Goal 05 — Product Ecosystem**

OwnerHive should feel like one ecosystem rather than several unrelated products.

---

# **3. Core UX Philosophy**

The entire website should follow:

## **Discover → Evaluate → Convert → Use**

### **Discover**

"What does OwnerHive have for me?"

### **Evaluate**

"Is this product right for my business?"

### **Convert**

"Which plan should I choose?"

### **Use**

"How do I start using it?"

This should be the underlying UX model for the entire website.

---

## 4. Target Audience

Primary audiences:

- Small businesses
- Startups
- Agencies
- Enterprises
- Nepali businesses
- International businesses

The website should therefore avoid language and design that feels exclusively targeted at:

- Developers
- Large enterprises
- Marketing agencies
- Technical users

It needs to communicate that OwnerHive products can be understood and adopted by a business owner without technical expertise.

---

## 5. Desired Visitor Perception

The website should make visitors think:

### First

**"I can find the tool I need here."**

### Second

**"This can actually help my business."**

### Third

**"This looks professional and trustworthy."**

### Fourth

**"I understand what I would be getting."**

## **Fifth**

**"I should choose a plan."**

The website should not make the visitor think:

"This is a nice company website."

The desired reaction is:

**"They have exactly the type of product I need."**

---

## **6. Design Reference: Hostinger**

Hostinger should be used as a **UX and design philosophy reference**, not copied visually.

The useful principles to borrow are:

### **Product-first navigation**

Hostinger prominently organizes its offerings under Products, while also separating Solutions, Resources and Pricing.

### **Strong hero proposition**

The current Hostinger homepage immediately establishes what the platform does and follows it with a strong primary CTA.

### **User-goal organization**

Hostinger uses concepts such as Build, Launch, Grow and Manage to organize its product ecosystem around what customers want to accomplish rather than simply listing features.

### **Product + pricing visibility**

Hostinger repeatedly introduces products and then moves visitors toward plans and pricing rather than treating pricing as an isolated page.

### **Educational ecosystem**

Hostinger also integrates documentation, guides, tutorials, learning resources and product updates into the broader website ecosystem.

OwnerHive should adopt these principles while developing its own identity.

---

## 7. New Website Information Architecture

The recommended top-level structure is:

The account/dashboard itself can remain on the application domain.

---

## 8. Main Navigation

Recommended desktop navigation:

[OWNERHIVE]

Products

Solutions

Pricing

Resources

About

Login

[Get Started]

## Navigation priority

1. Products
2. Solutions
3. Pricing
4. Resources
5. About

The most visually prominent action should be:

### Get Started

Login should be visually secondary.

---

## 9. Products Mega Menu

Products should use a large dropdown rather than a simple list.

Suggested structure:

### PRODUCTS

Explore products

Find the right tool for your business

---

#### SAAS

Business software and productivity tools

#### AI

AI-powered business solutions

#### DIGITAL TOOLS

Tools designed for everyday business needs

#### MARKETING

Tools for attracting, engaging and retaining customers

---

Featured Product

[Product image]

[Product name]

[Short value proposition]

View all products →

With only 4–5 products initially, the mega menu should not become unnecessarily complicated.

---

## 10. Homepage User Flow

The homepage should follow this sequence:

```
HEADER
↓
HERO
↓
PRODUCT DISCOVERY
↓
BUSINESS GOALS / SOLUTIONS
↓
FEATURED PRODUCT
↓
OWNERHIVE ECOSYSTEM
↓
AI DIFFERENTIATION
↓
TRUST / SOCIAL PROOF
↓
HOW IT WORKS
↓
RESOURCES
↓
FINAL CTA
↓
FOOTER
```

## 11. Homepage — Section 01: Header

### Purpose

Allow users to immediately:

- Browse products
- Explore solutions
- View pricing
- Access resources
- Login
- Start

### Requirements

- Sticky navigation on scroll
  - Clean white/light primary surface
  - Clear typography
  - One primary CTA
  - Minimal visual clutter
- 

## 12. Homepage — Section 02: Hero

This is the most important section.

The hero must communicate the entire proposition without requiring scrolling.

### Hero requirements

It should answer:

**What is OwnerHive?**

**What can I get?**

**Why should I care?**

**What should I do next?**

Recommended structure:

[Eyebrow]

DIGITAL TOOLS FOR MODERN BUSINESSES

[Large headline]

A clear, product-focused  
OwnerHive value proposition.

[Supporting statement]

Short explanation covering  
software + AI + digital solutions.

[Explore Products]    [View Solutions]

[Large product UI visual]

The exact copy will be created later.

## Hero visual

Do NOT use generic stock photography.

Use:

- Product dashboard screenshots
- UI compositions
- Product interface mockups
- Product cards
- Subtle UI animation

The products themselves should become the visual identity of the website.

---

## 13. Hero Conversion Principle

The hero should be capable of generating a conversion by itself.

If a visitor never scrolls, they should still have enough information to:

**Understand OwnerHive → Become interested → Click Explore/Get Started**

The rest of the homepage should reinforce the decision rather than rescue a weak hero.

---

## 14. Homepage — Section 03: Featured Products

Immediately after the hero, introduce the products.

### Heading concept

**Tools built to help your business do more.**

Show the 3 most important products.

Each product card should contain:

Product visual

Product name

One-line value proposition

3 key capabilities

Starting price / pricing indicator

[Explore Product]

Example structure:

## 15. Product Card Rules

Product cards must sell the product.

Do not make them merely informational.

Every card should communicate:

**What is it?**

**What does it solve?**

**What can it do?**

**How much does it start at?**

**Where can I learn more?**

Avoid putting 10+ features into a card.

Use the 3 strongest selling points.

## 16. Homepage — Section 04: Browse by Goal

This section should borrow the strongest UX principle from Hostinger: organize part of the experience around what users want to accomplish rather than forcing them to understand product categories. Hostinger currently uses Build, Launch, Grow and Manage as goal-oriented organization.

OwnerHive can use something like:

### What do you want to accomplish?

Manage my social media

OwnerHive Social

Automate my business

↓  
Relevant OwnerHive tools  
  
Use AI in my business  
↓  
AI products  
  
Improve my marketing  
↓  
Marketing products  
  
Grow my business  
↓  
Relevant solutions

This section should link directly to products or solution pages.

---

## 17. Homepage — Section 05: Featured Product Showcase

Choose one flagship product.

The first likely candidate is:

### **OwnerHive Social**

because it has a strong visual product experience and a clear business problem.

Structure:

[Product label]

OwnerHive Social

Manage your social media  
from one powerful workspace.

[Product screenshot / video]

Capabilities:

- Publish
- Manage multiple accounts
- Unified inbox

- Analytics
- AI replies

[Explore OwnerHive Social]

This section should feel like a mini product landing page.

## 18. OwnerHive Social — AI Differentiator

OwnerHive's AI capability should be treated as a major differentiator.

The AI can operate using business knowledge such as:

- Products
- Services
- Prices
- Stock
- Company information
- Current offers
- Discounts
- Business information

This should be visually demonstrated.

Suggested concept:

YOUR BUSINESS KNOWLEDGE

Products  
Services  
Prices  
Stock  
Offers  
Company information

↓

OWNERHIVE AI

↓

Replies  
Customer support

Lead engagement  
Sales conversations

This is stronger than simply saying:

**"AI-powered."**

The website should communicate:

**AI that understands the business it is working for.**

---

## 19. Homepage — Section 06: OwnerHive Ecosystem

The website should establish that OwnerHive is more than one product.

Concept:

**One account. Multiple business tools.**

Show:

The goal is to make customers understand that buying one product today doesn't mean OwnerHive is a one-product company.

They are entering an ecosystem.

---

## 20. Homepage — Section 07: Why OwnerHive

This section should not simply repeat product features.

It should explain why the company/platform is a better choice.

Suggested pillars:

### **Simple**

Powerful tools without unnecessary complexity.

### **Connected**

Multiple business tools through one ecosystem.

### **Practical**

Products designed around real business workflows.

### **AI-powered**

Automation that helps businesses save time and work smarter.

### **Built to grow**

Start with one product and expand as the business grows.

---

## **21. Homepage — Section 08: Social Proof**

Use:

- Customer logos
- Testimonials
- Reviews
- Usage statistics
- Case studies

Only show verified statistics.

The current OwnerHive website already uses platform statistics and claims such as active users and uptime. The redesign should retain the concept of proof but make it visually more credible and product-oriented.

Recommended hierarchy:

Customer logos

Customer testimonial

↓  
Specific result  
↓  
Case study

## 22. Homepage — Section 09: How It Works

Explain the complete OwnerHive journey.

01  
Choose a product

Explore tools designed around  
your business needs.

↓

02  
Choose your plan

Select the plan that fits  
your business.

↓

03  
Create your account

Set up your OwnerHive account.

↓

04  
Start using your product

Access your product from  
your OwnerHive dashboard.

This is particularly important because OwnerHive requires an account before purchase.

## 23. Homepage — Section 10: Resources

Resources should support both conversion and long-term SEO.

Show:

Learn. Compare. Build.

[Blog]

Expert insights and business advice

[Guides]

Practical how-to content

[Comparisons]

Understand your options

[Product Updates]

What's new at OwnerHive

[Customer Stories]

See how businesses use OwnerHive

---

## 24. Homepage — Section 11: Final CTA

The final CTA should return to the primary objective.

Suggested concept:

**Find the right tools for your business.**

Supporting text:

Short, reassuring statement.

Buttons:

**Explore Products**

**Get Started**

Avoid ending the homepage with a generic:

Contact us.

Contact should remain available, but it should not be the primary conversion.

---

## 25. Products Page

URL concept:

/products

Purpose:

**Product discovery.**

Structure:

```
Hero
↓
All Products
↓
Category Filters
↓
Best Sellers
↓
Recommended
↓
All Products
↓
Compare Products
↓
Final CTA
```

---

## 26. Products Page — Filters

Initial filters:

### Category

- SaaS
- AI
- Digital Tools

- Marketing

### Product status

- New
- Popular
- Best Seller

Do not over-engineer filters while there are only 4–5 products.

The architecture should support more products later.

---

## 27. Best Sellers

Because you specifically want this discovery method, **Best Sellers** should be a first-class component.

Use:

BEST SELLERS

[Product] [Product] [Product]

Product cards should display a subtle:

### BEST SELLER

badge.

Do not overuse badges.

---

## 28. Recommended for You

This can eventually become personalized.

Initially it can be based on:

- User-selected business type
- Solution category
- Previous product views
- Previous purchases
- Product relationships

For example:

Recommended for agencies

[OwnerHive Social]

[Other relevant product]

Later:

Recommended for you

Because you viewed OwnerHive Social

---

## 29. Individual Product Page

This is the primary sales page.

Every product should follow the same general framework.

PRODUCT HERO

↓

TRUST

↓

PROBLEM

↓

SOLUTION

↓

CORE FEATURES

↓

PRODUCT DEMONSTRATION

↓

BENEFITS

↓

USE CASES

↓

ADVANCED / AI FEATURES

↓

INTEGRATIONS

↓

COMPARISON

↓

PRICING

↓

FAQ

↓

FINAL CTA

---

## 30. Product Hero

Structure:

[Category]

Product Name

Clear value proposition.

Short supporting explanation.

[Choose a Plan]

[Watch Demo]

Starting price

[Large product interface]

The product screenshot should dominate the visual area.

---

## 31. Product Problem Section

Explain the problem before listing features.

Example structure:

**Running your business shouldn't require five different tools.**

Then identify the problems.

Problem 01

Switching between platforms

Problem 02

Manual repetitive work

Problem 03

Lost customer conversations

Problem 04

Limited visibility

Then transition:

**OwnerHive solves this from one workspace.**

---

## 32. Features Section

Do not create a wall of feature cards.

Organize features into logical groups.

For OwnerHive Social:

PUBLISH

Create and publish content

MANAGE

Manage multiple accounts

ENGAGE

Handle messages and comments

AUTOMATE

Automate repetitive actions

ANALYZE

Understand performance

AI

Automate customer responses

Each feature should be paired with an actual interface visual where possible.

---

## 33. Product Demonstration

This should be one of the largest sections.

Possible formats:

### **Option A**

Large dashboard screenshot.

### **Option B**

Interactive product preview.

### **Option C**

Short product video.

### **Option D**

Animated UI walkthrough.

Priority:

**Real product UI > abstract graphics.**

---

## 34. Benefits vs Features

Every product page must distinguish between:

### **Feature**

"Unified inbox."

and:

### **Benefit**

"Respond to customers across multiple connected platforms without switching between apps."

The website should prioritize benefits.

---

## 35. Use Cases

Show who should use the product.

For OwnerHive Social:

Small businesses  
Manage your entire social presence.

Agencies  
Manage multiple clients efficiently.

Startups  
Build consistent brand presence.

Growing businesses  
Automate engagement and publishing.

This allows different audiences to self-identify.

---

## 36. Pricing

Pricing should be integrated into the product page.

Do not force visitors to leave the product page just to discover the cost.

Pricing component:

MONTHLY      ANNUAL

---

PLAN 01  
Best for...

\$XX / month

Features

[Choose Plan]

PLAN 02  
Most Popular

\$XX / month

Features

[Choose Plan]

PLAN 03  
Best for...

\$XX / month

Features

[Choose Plan]

## 37. Regional Pricing

OwnerHive will have different pricing for:

### Nepal

Payment:

- eSewa
- Fonepay

### USA

Payment:

- Stripe

The website should support regional pricing.

Recommended UX:

[ Nepal  ]

Rs. XXXX / month

or:

[ United States 🇺🇸 ]

\$XX / month

The visitor should not have to manually calculate currency.

Provide a discreet region/currency selector.

---

## 38. Plan Selection Flow

Primary conversion:

```
Product
↓
Choose Plan
↓
Login / Create Account
↓
Checkout
↓
Payment
↓
Confirmation
↓
Dashboard
```

If the visitor is already logged in:

```
Product
↓
Choose Plan
↓
Checkout
↓
Payment
↓
Dashboard
```

Do not force existing customers to authenticate twice.

---

## 39. Account Flow

Because accounts are required before purchase:

### New user

```
graph TD; A[Choose Plan] --> B[Create Account]; B --> C[Verify]; C --> D[Checkout]; D --> E[Payment]; E --> F[Dashboard];
```

### Existing user

```
graph TD; A[Choose Plan] --> B[Login]; B --> C[Checkout]; C --> D[Payment]; D --> E[Dashboard];
```

---

## 40. Request Access Flow

For products requiring approval/access:

```
graph TD; A[Product] --> B[Request Access]; B --> C[Login/Create Account]; C --> D[ ];
```

Submit Request  
↓  
Request Confirmation  
↓  
OwnerHive Review  
↓  
Access Granted  
↓  
Dashboard  
↓  
Product Available

The UI must clearly distinguish:

**Buy Now**

from:

**Request Access**

A user should never wonder why they paid but cannot see their product.

---

## 41. Dashboard Handoff

The website's job ends when the user successfully enters the product ecosystem.

The conceptual transition should be:

OWNERHIVE WEBSITE

Discover  
Evaluate  
Purchase

↓

OWNERHIVE ACCOUNT

Account  
Orders  
Products

↓

## OWNERHIVE DASHBOARD

Access  
Configure  
Use  
Manage

The public website and dashboard should share:

- Logo
- Core brand color
- Typography family
- Icon language
- Border radius
- Button language
- General design personality

The exact dashboard UI can be integrated later.

---

## 42. Solutions Architecture

Solutions should be organized by customer type/use case.

Recommended:

### Solutions

Small Businesses  
Startups  
Agencies  
Enterprise

Each solution page should follow:

Hero  
↓  
Business challenges  
↓  
Recommended OwnerHive products  
↓  
How they work together  
↓  
Use cases

↓  
Benefits  
↓  
Customer proof  
↓  
Recommended plans  
↓  
CTA

---

## 43. Small Business Solution

The messaging should focus on:

- Simplicity
- Cost efficiency
- Automation
- Saving time
- Managing more with fewer tools

Product recommendations should be prominent.

---

## 44. Agency Solution

Focus on:

- Multiple clients
- Multiple accounts
- Team collaboration
- Centralized management
- Reporting
- Automation

This audience can potentially become a high-value customer segment.

---

## 45. Enterprise Solution

Focus on:

- Scale
- Security
- Reliability

- Teams
- Permissions
- Integrations
- Support

Do not make Enterprise feel like a completely separate company.

It should still feel like OwnerHive.

---

## 46. Pricing Page

The pricing page should answer:

"What can I get from OwnerHive and how much does it cost?"

Structure:

```
Hero
↓
Product pricing overview
↓
Plan comparison
↓
Product-by-product pricing
↓
Regional pricing
↓
FAQ
↓
CTA
```

However, product-specific pricing should still exist on individual product pages.

The pricing page is an overview—not the only place pricing exists.

---

## 47. Resources Architecture

Resources:

```
Resources
|
```

- └─ Blog
- └─ Guides
- └─ Tutorials
- └─ Product Updates
- └─ Comparisons
- └─ Customer Stories
- └─ Help Center

This supports:

- SEO
- Education
- Product discovery
- Purchase confidence
- Customer retention

Hostinger currently uses a broad resource ecosystem including blog, documentation, tutorials, learning resources and product updates.

---

## 48. Blog

Blog content should eventually support product discovery.

Not just generic business content.

For example:

```
Problem
↓
Educational article
↓
Relevant OwnerHive solution
↓
Product page
↓
CTA
```

This creates a content-to-product funnel.

---

## 49. Comparisons

A comparison system should be retained because the current OwnerHive site already includes comparisons in its resource structure.

Examples:

OwnerHive Social vs Competitor  
OwnerHive Social vs Manual Posting  
OwnerHive Tool vs Separate Tools

Comparison pages should be objective and useful rather than aggressive competitor attacks.

---

## 50. Product Updates

Product updates should communicate:

- New features
- Improvements
- Integrations
- AI updates
- Security updates
- Major releases

This builds confidence that the products are actively maintained.

---

## 51. Help Center

The Help Center should not be visually buried.

It should be available through:

- Resources
- Product pages
- Footer
- Account/dashboard

Product pages should have contextual links:

**Need help deciding? View documentation →**

---

## 52. About Page

About should exist but should not dominate the public website.

Recommended structure:

```
Mission
↓
What OwnerHive is building
↓
Our approach
↓
Company
↓
Team
↓
Values
↓
Contact
```

The company story supports the product story.

It does not replace it.

---

## 53. Contact Page

Primary purposes:

- Sales
- Enterprise inquiries
- Partnership
- Support routing

Do not use Contact as the primary CTA everywhere.

For product questions:

**View Product**

For purchases:

**Choose Plan**

For enterprise:

**Talk to Sales**

For technical help:

**Visit Help Center**

---

## 54. Footer Architecture

Recommended:

OWNERHIVE

Products

- All Products
- SaaS
- AI
- Digital Tools
- Marketing

Solutions

- Small Business
- Startups
- Agencies
- Enterprise

Resources

- Blog
- Guides
- Tutorials
- Comparisons
- Product Updates
- Help Center

Company

- About
- Contact

Account

- Login
- Dashboard

Legal

- Privacy
- Terms
- Refund Policy

---

## 55. Visual Design Direction

Overall visual personality:

**Modern**

**Premium**

**Product-focused**

**Technical**

**Approachable**

**Trustworthy**

Avoid making the website look:

- Corporate banking
- Generic agency
- Cheap startup template
- Overly futuristic
- Gaming-inspired
- Excessively colorful

---

## 56. Layout System

Use a structured wide desktop grid.

Recommended:

Maximum content width:  
1200–1280px

Large section spacing:

80–140px

Card spacing:  
20–32px

Text line length:  
Controlled / readable

Hero:  
Large horizontal composition

Mobile:  
Single-column priority layout

Whitespace should be generous.

---

## 57. Typography

Use one strong modern sans-serif family.

Hierarchy:

Display / H1  
Large + bold

H2  
Strong + compact

H3  
Semibold

Body  
Comfortable and readable

Caption  
Small + muted

Typography should carry much of the visual personality.

Avoid decorative fonts.

---

## 58. Color System

Because the existing OwnerHive logo is being retained, the logo should determine the primary brand color.

Build the new system around:

```
Brand Primary  
Brand Dark  
Neutral 900  
Neutral 700  
Neutral 500  
Neutral 300  
Neutral 100  
White  
Success  
Warning  
Error
```

The website should use color intentionally.

Avoid rainbow-colored product cards.

---

## 59. Cards

Cards should have:

- Clear hierarchy
- Subtle borders
- Moderate radius
- Strong spacing
- Minimal shadows

Avoid excessive floating/shadow effects.

Use cards where they help organize information.

Do not put every section inside a card.

---

## 60. Product Visual Language

This is one of the highest-priority design elements.

The website should use actual OwnerHive interfaces wherever possible.

Priority:

Actual product UI  
↓  
UI mockup  
↓  
Custom illustration  
↓  
Generic visual

Generic stock photos should be avoided for core product sections.

---

## 61. Product Screenshots

Screenshots should be:

- High resolution
- Clean
- Consistent
- Cropped intentionally
- Presented inside the same device/browser frame system

Do not mix:

- MacBook mockups
- Floating phone frames
- Random browser windows
- Different visual styles

Create one OwnerHive product-visual system.

---

## 62. Animation Guidelines

Animation should support comprehension.

Recommended:

- Fade
- Slide
- Scale

- Hover
- Product UI transitions
- Sticky elements
- Scroll-based reveals

Avoid:

- Excessive parallax
- Constant movement
- Long page transitions
- Distracting floating objects
- Animation before content

The site should feel fast.

---

## 63. CTA System

Only two primary CTA concepts should dominate.

### Primary

**Get Started**

**Product-specific**

**Choose a Plan**

Secondary:

- Explore Products
- Learn More
- Watch Demo
- View Pricing
- Compare Products

Avoid having every button say something different.

---

## 64. CTA Hierarchy

Use:

PRIMARY CTA  
Filled button

SECONDARY CTA  
Outline / text button

TERTIARY ACTION  
Text link

Example:

[Choose a Plan]      Watch Demo →

Not:

[Buy Now]  
[Learn More]  
[Try It]  
[Start]  
[Explore]  
[Contact]  
[Book Demo]

all competing equally.

---

## 65. Trust Design

Trust should appear throughout the journey rather than only at the bottom.

Potential trust signals:

- Customer logos
- Reviews
- Security information
- Uptime
- Product activity
- Customer stories
- Payment security
- Support availability
- Transparent pricing
- Clear refund policy

Only publish factual/verifiable claims.

---

## 66. Responsive Design

### Desktop

Full navigation, multi-column product displays and large product visuals.

### Tablet

Reduced navigation and two-column content.

### Mobile

Priority order:

Logo  
Menu  
CTA

Hero  
Product visual  
CTA

Products  
Solutions  
Product showcase

Trust  
Resources  
Final CTA

The mobile version should not simply shrink desktop components.

---

## 67. Search

Search should eventually cover:

- Products
- Blog
- Guides

- Documentation
- Comparisons

For only 4–5 products, search isn't essential for product discovery initially.

It becomes increasingly valuable as the content library grows.

---

## 68. Personalization

"Recommended for you" should be designed into the architecture but does not need sophisticated AI initially.

Phase 1:

**Recommended by business type/category**

Phase 2:

**Based on viewed products**

Phase 3:

**Based on account/purchase behavior**

Phase 4:

**Personalized product recommendations**

---

## 69. Website Conversion Funnel

The complete funnel should be:

## 70. Alternative Direct Product Funnel

Visitors may enter through Google, advertisements or content directly onto a product page.

Therefore:

Choose Plan

Account

Checkout

Every product page must therefore work independently.

---

## 71. Content Architecture Principle

Content should answer questions in this order:

What is it?

Why do I need it?

What can it do?

How does it work?

Is it right for me?

Can I trust it?

How much is it?

What happens after purchase?

This should be the fundamental content architecture of product pages.

---

## 72. Above-the-Fold Rule

Every important page should immediately establish:

**Where am I?**

**What is this?**

**Why does it matter?**

**What can I do next?**

For a product page:

Product name  
Value proposition  
Product visual  
Price  
Primary CTA

All should be visible without excessive scrolling.

---

## 73. Don't Overuse "All-in-One"

The current OwnerHive site repeatedly uses the all-in-one/platform concept.

The redesign should retain the **ecosystem idea** but avoid making "all-in-one" the answer to everything.

Instead, demonstrate the value through the actual products.

Show:

Multiple products → One account → One ecosystem

rather than repeatedly saying:

All-in-one platform.

---

## 74. Product Architecture

Every product should eventually have structured metadata:

Product name  
Category  
Short description

Long description  
Target audiences  
Primary problems  
Features  
Benefits  
Integrations  
Pricing  
Plans  
Regional pricing  
Screenshots  
Videos  
FAQs

Status

This makes the website scalable when OwnerHive grows beyond 4–5 products.

---

## 75. Related Products

At the bottom of every product page:

You might also need

[Related Product]

[Related Product]

Example:

Someone viewing OwnerHive Social may see:

You may also like our customer engagement tools.

This is how the website can increase multi-product adoption.

---

## 76. Cross-Selling

After purchase:

Customer owns Product A

Dashboard

Recommended Product B

The public website should support the same logic:

Product A

Related Product B

Related Product C

This creates a product ecosystem rather than isolated SaaS products.

---

## 77. Design Consistency Rules

All pages must share:

- Same button system
- Same typography
- Same spacing system
- Same product-card system
- Same icon system
- Same border radius
- Same image treatment
- Same CTA hierarchy
- Same navigation
- Same footer

The individual products may have subtle visual identities, but they must clearly belong to OwnerHive.

---

## 78. What Should NOT Be Copied From Hostinger

Do not copy:

- Hostinger's exact colors
- Hostinger's typography
- Hostinger's exact layouts
- Hostinger's wording
- Hostinger's graphics
- Hostinger's illustrations
- Hostinger's product names
- Hostinger's branding

Use Hostinger as a **reference for UX maturity and product presentation**.

OwnerHive needs its own identity.

---

## 79. Final Design Personality

The final website should feel like:

**"A serious technology company that happens to make very useful products."**

Not:

**"A company trying to convince me it is innovative."**

The product interfaces should do most of the convincing.

---

## 80. OwnerHive Design Principles

These should become the rules used during the actual design process.

### Principle 01

**Products before corporate storytelling.**

### Principle 02

**Show, don't just describe.**

### Principle 03

Every major section has a purpose.

### Principle 04

The hero must work without scrolling.

### Principle 05

Product pages are sales pages.

### Principle 06

Features explain; benefits persuade.

### Principle 07

Use real product UI wherever possible.

### Principle 08

Never make users guess the next step.

### Principle 09

Pricing should be transparent and easy to understand.

### Principle 10

The website and dashboard should feel like one ecosystem.

---

## 81. Final Website Map

## 82. Final Homepage Blueprint

The final homepage should therefore be:

```
01  HEADER
    ↓
02  HERO
    "What OwnerHive is"
    ↓
03  FEATURED PRODUCTS
    "What can I buy?"
    ↓
04  BROWSE BY GOAL
    "What do I need?"
    ↓
05  FEATURED PRODUCT
    "Show me how it works"
    ↓
06  OWNERHIVE ECOSYSTEM
    "What else can OwnerHive do?"
    ↓
07  AI DIFFERENTIATOR
    "Why is this better?"
    ↓
08  SOCIAL PROOF
    "Can I trust them?"
    ↓
09  HOW IT WORKS
    "What happens if I choose them?"
    ↓
10  RESOURCES
    "Can I learn more?"
    ↓
11  FINAL CTA
    "I'm ready"
    ↓
12  FOOTER
```

---

## 83. Final UX Model

The entire website can ultimately be reduced to one model:

That final stage is important.

The goal isn't simply to sell **one product**.

The long-term UX should encourage:

**Product 1 → Product 2 → Product 3 → OwnerHive ecosystem**

while keeping every individual product valuable on its own.
